

Research Summary for Seven Seal Chronicles

Written by Guy Morris

Introduction

Interpretation of End-Time and Last-Day prophecy is a key premise within the Seven Seal Chronicle starting with SWARM.

Disclaimer: This research and the book represent my interpretation of scripture. Agree, disagree with your own interpretation or discount the whole topic, and that is the reader's choice. I do not profess to reflect anyone's views except my own. I also intentionally limit these discussions to provide context for SWARM, but these absolutely DO NOT REPRESENT a COMPLETE analysis of the various prophecy topics. That said, we can agree to disagree politely.

Disclaimer: Let me be clear, SWARM is not intended to be a religious or doctrinal book, but an espionage story with a backdrop premise of the days in which we live and the how close those days align to prophecy. While there are numerous websites and books that speak to the subject of end-time prophecy, frankly, I find most of them full of outdated, mystical or wrong interpretations. There are some scholars and YouTube producers who do a reasonable and fair job at presenting the prophecy and exploring the common or possible interpretations. I will attempt to link you to those sites as reference.

Disclaimer: I am not here to convince you of my views, but rather to inspire investigation, thought and debate. I encourage everyone to explore. Of course, I could be wrong on one or several interpretations as well, but we will know soon enough. Right or wrong interpretations are not as important as a faithful keeping watch with a scriptural lens on these unique times.

Basic Principle: Not a Crystal Ball – A Prism to Read Events

A common error by even well-known scholars can be to attempt to use prophecy as a way to predict the future. Rather, the proper use of prophecy is to use like a filter or a lens through which to view events as they unfold. In viewing this lens, there are a few critical aspects to focus on.

Non-Linear: For the most part, end-time prophecy is not written in a linear fashion such as this happens, then that happens. There are clumps of events that in some cases define an age, such as the age of conquest the world experienced 1500-1900, while other events reflect a narrow span of a few years, and still others reflect events in the heavenly realm, or I like to say in the spirit of the age.

Allegory: Much of end-time prophecy in Daniel, Ezekiel and Revelation are written in allegories where beasts and dragons and other characters will often represent a future government, kingdom, power or in modern terms alliance such as NATO, technical platform such as international banking or the internet, a political movement such as white supremacy or fascism, or the 'holistic' view of 'the church' in all of the denominational distortions.

The true view of prophecy about the end-times, during the end-times is to filter the nightly news through a prophetic lens.

Age of Gentiles: In prophecy, as you will see in the paper on Daniel and the Seventy-Seven periods, as well as comments from Jesus, there would come an extended period of time before the final end-time prophecies would be fulfilled. This should have prevented scholars from pointing at each evil king and crying anti-Christ.

The context for the Age of Gentiles refers to non-Jewish control over Israel and Jerusalem, which began with the Roman destruction in 70 AD and ended with a UN resolution in 1947. Since 1947, virtually all of the signs-of-the-times prophecies have fulfilled and we are in the process of fulfilling the last-day prophecies that lead up to Armageddon.

You may agree, disagree or write me off entirely.

Statistical Analysis: During the late 80s, I had a senior position at an international oil company with access to geologic and other research data, as well as an exceptionally long list of National Geographic magazine article descriptions of natural changes such as fishing stock declines, clean rivers, extinctions, etc. I also looked at computing power, global communications, the internet, advanced medical and weapon technology, political realignments, and much more, and then I ran a statistical analysis of the probability of all events occurring within a 70-year period, excluding the known events for major volcanic or asteroid impacts.

After three-days of loading data and waiting for the system to churn out a result over a long, lonely weekend, the result came back an astonishing . . . 1.4 trillion to one. It got my attention.
